Zpravodaj 2021/1–4

Zpravodaj is the journal of $\mathcal{C}\mathcal{S}\text{TUG}$, the T_EX user group oriented mainly but not entirely to the Czech and Slovak languages. The full issue can be downloaded at cstug.cz/bulletin.

PETR SOJKA, Úvodník [Introductory word]; pp. 1–2

Go forth and participate in $\mathcal{C}\mathcal{S}\text{TUG}$ to make the bright future of T_EX & Friends a reality! *You can!*

VÍT NOVOTNÝ, Overleaf: Kolaborativní webový editor L^AT_EXu [Overleaf: Collaborative online L^AT_EX editor]; pp. 3–8

The president of TUG named the collaborative online editor Overleaf “one of the several most important changes in the T_EX world for the last years”. In this article, I introduce Overleaf and describe its key functions and planned features.

PETR OLŠÁK, T_EX in a nutshell; pp. 9–55

Nowadays, many users discover T_EX through high-level formats that hide the complexity of typesetting behind a facade of a friendly markup language. However, all except the simplest of typesetting tasks require that users can understand what happens under the hood and know how they can influence the algorithms of T_EX when needed.

In this article, the author introduces the foundations of most high-level T_EX formats, which will help the readers with their day-to-day work with T_EX as well as their more difficult typesetting tasks.

The readers are first introduced to the program T_EX and its extensions. Then, they learn about the different processors of T_EX and their modes. Finally, the readers learn about the registers and primitive commands of T_EX as well as the macros of the plain T_EX format. The word of the day is brevity as the exposition spans less than forty pages: Excellent reading material for an otherwise uneventful train ride!

The author has previously written three books about T_EX, has developed the OpT_EX format, maintains a dozen package on the CTAN archive, and has taught a university course about T_EX for over twenty years.

DOMINIK REHÁK, Priama sadzba dokumentov rôznych formátov v T_EXu pomocou nástroja Pandoc [Direct typesetting of various document formats in T_EX using the Pandoc utility]; pp. 83–92

The Markdown T_EX package allows authors to typeset documents in the Markdown language and maintain control over how the documents will look. However, the package doesn’t provide support for document formats other than Markdown. In contrast, the Pandoc tool enables the conversion between dozens of document formats including T_EX and Markdown, but provides only rudimentary control over styling.

This article elaborates on the possibility of typesetting various text formats directly in T_EX by adding support for Pandoc’s intermediate document representation into the Markdown package. I focus mainly on the intermediate representations of Markdown and Pandoc as well as the differences between them, which my upcoming implementation will have to overcome. At the end of my article, I present the planned user interface for T_EX.

PETER WILSON, It might work XI; pp. 93–104

This paper shows several ways how to create a miniature book printed on just a single sheet of paper. Some L^AT_EX solutions are given.
